

The Clinical Trials Management System: OnCore

Sandy Botros; Nancy Reilly RN, MS, CCRC, CHRC

Introduction:

OnCore, is a web-based clinical trials management system used for organization, management, and documentation of clinical trials. The system was designed through collaboration between medical and cancer centers over the last decade. OnCore is HIPPA compliant and only accessible by study staff and local OnCore administrators. It saves detailed information including study records, enrollment logs, finances, schedules of events, study staff lists, and trial timeline progress. It also enables clinical research teams to plan, manage, and track their clinical trial portfolios. In addition, it allows a wide variety of study staff including coordinators, physicians, researchers, and nurses to work in parallel to accomplish these projected timelines. OnCore also gives the opportunities for CROs to work with researchers within the same clinical trials management system for electronic audits. Moreover, it provides training modules through Advara University prior to granting access to the users. Furthermore, The Clinical Trials office is available to meet with staff via video conference to provide addition training if needed.

Procedure:

The following steps are entered to OnCore by The Clinical Trials Office Team to create a study protocol for each study Team:

- 1) A protocol file is created for each study
- 2) Calendar is inserted with important start and follow-up dates
- 3) Research status is recorded as either planned, occurred or missed and can be modified if necessary
- 4) Enter data collected and its date, location, and comments
- 5) Create a checklist to track the procedure

The importance of Oncore for Study Teams:

The purpose of OnCore is to organize and manage in parallel all aspects of a clinical trial in a web-based software system. It helps study teams track their timelines, ensures completeness of data collection, and assists in managing participants visits. Overall, it facilitates the workflow of the study teams and organizes their study requirements in order to help them reach their goals in a timely manner and easier ways compared to the past.
